AMERICAN CHEMET CORPORATION

AG Copp 75
Protectant Copper Fungicide

WARNING
KEEP OUT OF REACH OF CHILDREN

Please read Label and Safety Data Sheet Completely before use.

ACTIVE INGREDIENT: Contains 750g/kg copper as cuprous oxide in the form of a wettable powder.

	GHS CLASSIFICATION: Acute Oral Toxicity Cat. 4 Eye Irritant Cat. 2 STOT Rep. Exp. 2 Hazardous to the Aquatic Environment Acute & Chronic Cat. 1 Hazardous to Terrestrial Vertebrates	**HAZARD STATEMENT:** Harmful if swallowed. Causes serous eye irritation. May cause damage to organs through prolonged or repeated exposure. Very toxic to aquatic life with long lasting effects. Hazardous to terrestrial vertebrates (birds).

QUALIFICATION REQUIREMENT:
Persons mixing, loading, applying, or otherwise handling AG Copp 75 must meet the qualification requirements set out in the EPA Hazardous Substances (Hazardous Property Controls) Notice 2017.

RECORD KEEPING:
Records of use as described in NZS8409 Management of Agricultural Chemicals must be kept in certain circumstances. See SDS for details.

FIRST AID:
If medical advice is needed, have product label or container at hand.
IF SWALLOWED: Call a POISON CENTRE or doctor/physician if you feel unwell.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present, and easy to do. Continue rinsing. If eye irritation persists, get medical advice/attention.
IF ON SKIN: Wash with soap and water.
IF INHALED: Remove to fresh air and keep at rest in a position comfortable for breathing. Call a POISON CENTRE or doctor/physician if you feel unwell or if irritation persists.
24-hour Emergency Telephone Number — for advice contact the National Poisons Centre – 0800 POISON (0800 764 766) — or a doctor, immediately.
For specialist advice in an emergency only, call CHEMCALL or 0800 243 6225. In a transport emergency, call 111.

TRANSPORT:
Do not carry on a passenger service vehicle. Segregate from foodstuffs.

SAFETY DATA SHEET:
A Safety Data Sheet (SDS) for AG Copp 75 is available from Metachem Ltd. NZ on request or www.arxada.co.nz.

SPILLAGE:
Wear protective clothing and prevent material entering waterways. Absorb spill with inert material and place in waste containers. Wash area with water and absorb with further inert material. Dispose of waste safely in an approved landfill.

STORAGE:
• Store in original container tightly closed and in a locked, dry, cool, well-ventilated area, away from feed, seeds and foodstuffs. Storage must be in accordance with the current version of NZS 8409 Management of Agrichemicals.
• When stored appropriately, this product should show no significant degradation for 2 years from the date of manufacture (D.O.M.). Contact your supplier for further information about the use of any product that is older than this.

DISPOSAL:
• Dispose of this product only by using according to the label, or at an approved landfill, or another approved facility. Avoid contamination of any water supply with product or empty container.
• Container Disposal — ensure container is completely empty. Dispose of container by burying it in approved sanitary landfill.

WITHHOLDING PERIOD:
Do not apply to fruit and vegetable crops later than 1 day before harvest. GRAZING WITHHOLDING PERIOD: Leaf plucking in vineyards: Sheep must not be sent for slaughter or milked for 6 months after being removed from the vineyard (and placed on clean feed).

CONDITIONS OF SALE:
As no control can be exercised over the manner in which or the other conditions under which this product is used, all conditions and warranties expressed or implied, other than those required by statute are excluded. No responsibility will be accepted for any damage or injury whatsoever arising from the storage, handling, application or use of this product.

DIRECTIONS FOR USE:
It is an offence to use this product on animals.

RESTRAINTS:
DO NOT apply when poor drying conditions exist.
DO NOT apply when either hot or frost prone conditions prevail, or immediately prior to damaging frost conditions.
When multiple rate options are provided, use lower rates when disease pressure is light and higher rates when disease pressure is severe.

EQUIPMENT:
Apply using accurately calibrated and maintained equipment in accordance with The New Zealand Standard for the Management of Agrichemicals (NZS8409).

INSTRUCTIONS for Frost Injury Protection: (Bacterial Ice Nucleation Inhibitor):
Label rate application of AG Copp 75: Two to five days prior to anticipated frost conditions, will afford control of ice-nucleating bacteria (Pseudomonas syringae, Erwinia herbicola and Pseudomonas fluorescence) and may therefore provide protection against light frost. Not effective for severe frost conditions.

Compability: AG Copp 75 is compatible with spray oils, and most commonly used neutral or slightly alkaline fungicides, insecticides and miticides. Do not tank mix with acidic chemistry. Observe all precautions and limitations on labels of all products used in mixtures. If compatibility is a question, conduct a compatibility test before mixing. Mixtures with calcium nitrate may give rise to small skin markings on citrus. Kiwifruit – tank mixes past fruit set may result in fruit marking.

Resistance management strategy: AG Copp 75 is a GROUP M1 FUNGICIDE. AG Copp 75 is a member of the inorganic copper group of fungicides with multi-site activity. Some naturally occurring fungi and bacteria resistant to AG Copp 75 and other GROUP M1 fungicides may exist through normal genetic variability in any population. These will not be controlled by AG Copp 75 or other GROUP M1 fungicides. The resistant individuals can eventually dominate the population if copper products are used repeatedly. Since the occurrence of resistance may be difficult to detect prior to use, American Chemet Corporation accepts no liability for any losses that may result from the failure of AG Copp 75 to control resistant fungi or bacteria. To prevent or delay the development of resistance, do not use AG Copp 75 below label rates, use in tank mixtures where appropriate, and/or in rotation with fungicides or bactericides having a different mode of action. Refer to www.resistance.nzpps.org for further information.

Mixing: Add AG Copp 75 slowly to the spray tank partially filled with water and agitate mixture to maintain uniform suspension. If using in a mixture with an emulsifiable concentrate, add the AG Copp 75 after making the emulsion otherwise, add spreaders/stickers, insecticides, nutrients, etc. after the AG Copp 75. Ensure adequate agitation of both during mixing and application.

DIRECTIONS FOR USE: Unless otherwise stated the rates recommended below are for high volume spraying to the point of run off. For concentrate spraying, adjust the dilution rate accordingly.

Crop	Control	Rates g/100L of Water	Critical Comments
Apples	Blackspot	90	Apply as full cover spray between silver tip and green tip. **Warning:** Discontinue when green tip is 1 cm long as late application may cause phytotoxicity

	European Canker	70-90	Apply first application immediately post-harvest, before the occurrence of wet weather. Reapply at the beginning of leaf fall and repeat as required to provide cover of leaf scars until leaf fall is complete. Ensure good coverage.
Avocados	Anthracnose	55-70	Apply at monthly intervals from flowering to harvest. Reduce to 14 day intervals during prolonged wet periods.
Brassicas(cabbage, cauliflower, broccoli, brussel sprouts)	Downy mildew	55-70 (min 0.2 kg/ha)	Apply at first sign of disease and then every 10-14 days as necessary. **Warning:** Do not use on copper shy varieties.
Bush fruit cane	Cane wilt, cane spot, spur blight, leaf spot	55-70 (min 0.52 kg/ha)	Apply at bud burst at 14 day intervals. Use higher rate in early season.
Strawberries	Leaf spot	55-70 (min 0.52 kg/ha)	Begin application when plants are established and continue on a weekly schedule throughout the season. Use higher rate early season. Note: Discontinue if signs of crop injury appear.
Celery	Septoria - leaf spot	70 (min 0.35 kg/ha)	Apply as soon as the plants are set in the field, then at 5-7 day intervals depending on disease severity and environmental conditions. A wetting agent may be added at label recommended rates.
Citrus	Brown rot	70-90	Early winter and repeat 8-10 weeks later if necessary. Apply to bottom meter of tree and ground 0.5M beyond skirt. Copper marking may occur on sensitive varieties.
	Melanose, Verrucosis	35-70	Pre-blossom and petal fall sprays. Repeat 6 weeks later where melanose is a problem.
Cucurbits	Angular leaf spot, downy mildew	55-105 (min 0.5 kg/ha)	Apply at first sign of disease and repeat every 7-10 days.
Feijoas	Leaf spot (*Glomerella sphacelmoa*)	55-70	Repeat as necessary.
Grapes	Downy mildew, black spot	55-105	Apply at bud break and continue during pre and post bloom period every 14 days throughout the season as needed. Note: Discontinue if signs of injury are observed.
	Powdery mildew, *Botrytis*, Sour rot	55-90	The control of Sour Rot and the suppression of Powdery Mildew and Botrytis. Full control of Powdery Mildew and Botrytis may not be obtained under very high pressure situations. Apply at 10-14 day intervals throughout the season as required.
Kiwifruit	Leaf spot, *Botryosphaeria*	55-70	Apply as dormant season spray only. Apply after harvest but before leaf fall, after pruning and as 2 sprays 1 month apart, before bud burst. Apply full dilute water rate, appropriate

			for the size of canopy to gain complete coverage.
	PSA Pseudomonas syringae pathovar actinidiae	55-70	Apply after harvest but before leaf fall, after pruning and as 2 sprays 1 month apart, before bud blast. Apply full dilute water rate, appropriate for the size of canopy to gain complete coverage.
		37.5	Pre- and Post flowering. Do not apply to open flowers. Apply full dilute water rate, appropriate for the size of canopy to give complete coverage. Apply as required to prevent infection. **Warning:** higher rates and/ or multiple applications and/or poor drying conditions could results in leaf drop, leaf marking, and marginal leaf burn. Fruit marking may occur from any application post flowering. Apply alone post flowering as tank mixing with other chemistry may increase the risk of fruit marking and leaf damage.
Lettuce	Downy mildew	55-90	Begin treatment from seed emergence or when transplants are set in the field and repeat every 7-10 days as needed to suppress the disease.
Onions	Downy mildew, bacterial blight	70 (min 0.78 kg/ha)	Apply when the disease first appears and repeat every 10-14 days while conditions allow infection.
Passion fruit	*Septoria* spot, brown rot, grease spot	35 (min 0.35 kg/ha)	Apply at 2-4 week intervals alternating with mancozeb from Nov-Mar. Where grease spot is a problem, 2 week intervals may be necessary.
Pears (inc Nashi)	Blackspot	90	Apply at 21 day intervals as full coverage spray between silver tip and green tip. Reduce intervals if wet conditions persist. **Warning:** Do not apply between green tip and harvest as late application may cause phytotoxicity. Smooth skin varieties - russeting may occur.
	Fireblight	20-35	
Peas	Downy mildew, leaf spot	55-70	Begin treatment at seedling emergence & repeat every 7-14 days depending on disease severity.
Pine	*Dothistroma* - pine needle blight	Aerial. Mix 1.1 kg with 2 L of an intermediate type spraying oil and add sufficient water to give a total of 5L/ha.	Apply at a rate of 5L/ha using application equipment to give a droplet size of 65 microns. Repeat at yearly intervals as necessary. Nurseries are 2.66 kg/ha in 400-1000L of water.
Potatoes	Early & late blight	105-160 (min 1.1 kg/ha)	Apply when plants are 15cm high and then every 7 days until 2 weeks before harvest. Under severe disease pressure, use an alternative fungicide.

MINISTRY FOR PRIMARY INDUSTRIES

Stonefruit	Leaf curl	90	Timing is critical for effective control. Apply high rate at bud movement with second application at lower rate 10-14 days later.
	Shot hole, bladder plum		Use higher rate. Apply at leaf fall and at monthly intervals throughout winter until bud movement then treat as leaf curl.
	Bacterial Blast	170	Apply at leaf fall and repeat at monthly intervals throughout the winter until bud movement. Then treat as per leaf curl.
Tamarillo	Leaf spot	55	Apply as necessary
Tomatoes	Early & late blight, bacterial speck & spot	55-105 (min 0.7 kg/ha)	Apply at first sign of disease & every 7-10 days depending on severity of disease & weather conditions. Increase spray volume to ensure full coverage. Repeat after rain (more than 13mm) or irrigation.
