DANGER
KEEP OUT OF REACH OF CHILDREN

CAPETEC®

Fungicide

For the control of diseases in fruit, vegetable, ornamental and green house crops and for use on turf, ornamentals and certain soil borne diseases

Active ingredient
800 g/kg CAPTAN in the form of a water dispersible granule

GROUP M4 FUNGICIDE

Net contents: 10 kg

Bar code to be inserted

Public

PLEASE READ THE LABEL COMPLETELY BEFORE USE.
This product MUST NOT be used for any purpose or in any manner contrary to the controls and conditions of registration.
Any person purchasing, handling or disposing of this product must be suitably qualified.

DANGER
Causes serious eye damage. May cause skin irritation. May cause an allergic skin reaction.
Suspected of causing cancer.
Very toxic to aquatic life.

PREVENTION
Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not eat, drink or smoke while using. When mixing or applying, wear protective clothing, gloves and goggles. Avoid breathing dust/spray. Wash hands and face before eating, drinking or smoking and after work. Contaminated work clothing should not be allowed out of the workplace.

RESPONSE
Get medical advice/attention if you feel unwell or are exposed or concerned.

STORAGE
Store locked up in original container tightly closed and in a locked, dry, cool, well-ventilated area, away from feed, seeds and foodstuffs. See Safety Data Sheet for additional storage information.
Store locked up in original container tightly closed in a dry, cool, well-ventilated area, away from feed, seeds and foodstuffs. This product is classified as acutely toxic in the aquatic environment and storage of certain quantities may require bunding and signage. Records of use MUST be kept.
See the SDS for further information.

DISPOSAL
Dispose of contents/container in accordance with local regulations.
Container disposal: Ensure the container is empty. Triple rinse empty container and add rinsate to the spray tank. Recycle empty container through Agrecovery® (0800 247 326, www.agrecovery.co.nz). Otherwise puncture and bury in a suitable landfill. DO NOT reuse this container for any other purpose.
Product disposal: Dispose of this product only by using according to the label, or at an approved landfill or other approved facility.

FIRST AID
For advice, or if you are exposed or concerned, contact the National Poisons Centre 0800 POISON (0800 764 766) or a doctor. Have product container or label at hand.
IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. Immediately call a POISON CENTRE or doctor.
IF ON SKIN: Wash with soap and water. If skin irritation or rash occurs, get medical advice/attention. Take off contaminated clothing and wash it before reuse.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTRE or doctor.
IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTRE or doctor if you feel unwell.

SPILLAGE
Wear suitable protective clothing including face shield, chemical resistant gloves and boots. Prevent the product or spilled material from entering water bodies. Absorb liquid spills with inert material such as earth or sand and place into labelled waste containers. Wash area with water and absorb with further inert material. Dispose of safely at an approved facility.

SHELF LIFE
When stored appropriately, this product should show no significant degradation for two years from the date of manufacture. When using this product beyond this shelf life, contact the registrant for further information.

SAFETY DATA SHEET
If additional hazard or safety information is required, refer to the Safety Data Sheet. For a copy visit our website at **www.uplcorp.com/nz**.

EXCLUSION OF LIABILITY – PLEASE READ

GENERAL INFORMATION

CAPETEC is a broad-spectrum contact, protectant fungicide from the cyclic imide chemical group. **CAPETEC** has no systemic activity so complete coverage of the target is essential for best results.

RESISTANCE MANAGEMENT

CAPETEC contains the GROUP M4 FUNGICIDE captan, belonging to the phthalimide group of chemistry. Resistance to this fungicide could develop from excessive use. To minimise this risk, use strictly in accordance with label instructions and resistance management strategies (www.resistance.nzpps.org) that exist for any disease listed on this label. Maintain good agricultural practice.

DIRECTIONS FOR USE

It is an offence to use this product on animals.

The rates suggested are for high volume spraying to the point of run-off. For concentrate spraying, adjust dilution rate accordingly. Use the highest recommended rate and/or the shortest spray interval when disease pressure is high. Ensure thorough coverage of all parts of treated plants.

FRUIT CROPS

Crop	Disease	Rate	Remarks
Apples & pears	Bull's eye rot Black spot Glomerella Sooty blotch	75-125 g/100 L of water	For blackspot control apply the high rate at 7 day intervals from green tip to petal fall. The rate may be reduced and the interval may be increased to 10-14 days, from petal fall to harvest. To control bull's eye rot, glomerella and sooty blotch, use the high rate from January through to harvest. **CAPETEC** may increase the risk of russet on russet-sensitive varieties. Use alternative fungicides on these varieties from full bloom to second cover. DO NOT APPLY TO ANJOU PEARS.
	European canker	125 g/100 L water	Apply at 10-14 day intervals prior to and during harvest when weather conditions favour spread of disease. Observe PHI at all times.
Blueberries	Stem blight Leaf spot Botrytis	125 g/100 L of water	Apply just prior to flowering, at 10% flowering and at petal fall. Continue to spray at 10-14 day intervals until harvest.
Boysenberries, loganberries, other brambles	Cane spot	125 g/100 L of water	Apply at petal fall and repeat at 10-14 day intervals until harvest.
Citrus	Brown rot	125-240 g/100 L of water	Apply as a skirt spray before winter. Wet trees thoroughly to a height of 1 m. Repeat 10 weeks later. In Autumn, treat whole tree and repeat 4-6 weeks later.
Black & red Currants	Leaf spot Botrytis	125 g/100 L of water	Apply at 10-14 day intervals from green tip until harvest.
Gooseberries	Leaf spot Botrytis	125 g/100 L of water	Apply just prior to flowering, and repeat at petal fall, preharvest and postharvest. To control Botrytis flower rot, apply at 5-7 day intervals over flowering when infection conditions are favourable for disease.
Grapes	Botrytis Dead arm Anthracnose	125 g/100 L of water	Apply at 14 day intervals from the time when shoots are 50-80 mm long.
	Downy mildew	90 g/ 100 L of water	Apply at the start of flowering. Use an alternative botryticide over the remainder of the flowering period or use **CAPETEC** at 125 g/100 L for Botrytis control. Continue applications at the 90 g rate at 14 day intervals after flowering.

Public

Raspberries	Cane spot Spur blight Botrytis	125 g/100 L of water	Main crop: apply at 10-14 day intervals from green tip until harvest. Autumn crop: Apply at 10-14 day intervals from November until harvest. Note: Thorough coverage of plants is essential.
Stonefruit	Brown rot Scab Shothole	125 g/100 L of water	Apply from bud movement until bloom at 7 day intervals, then at 3-4 day intervals until petal fall. Continue applications at 14 day intervals until 3 weeks before harvest and then apply at 7 day intervals until harvest particularly in wet conditions.
Strawberries	Leaf spot Botrytis	3 kg/ha or 125 g/100 L of water	Apply as required to control leaf spot. For botrytis control, apply 3 kg/ha at 7 day intervals from the start of flowering and between pickings if warm wet conditions prevail.

VEGETABLE CROPS

Crop	Disease	Rate	Remarks
Peas **Beans**	Root rot Damping-off	7-9 kg/ha	Apply as a broadcast spray before planting and incorporate into the top 100 mm of soil.
Carrots	Ring spot Cercospora blight	3 kg/ha	Apply as required
Cucurbits	Anthracnose Downy mildew	1.5–3 kg/ha	Apply as required in sufficient water to obtain complete coverage
Lettuce	Leaf spot	4.5 kg/ha	Apply at 10-14 day intervals from the rosette stage.
Potato seed	Seed rot Damping off	125 g/100 L of water	Dip seed potatoes within 6 hours of cutting.

AMENITY TURF AND ORNAMENTALS

Crop	Disease	Rate	Remarks
Lawns	Brown patch Leaf spot Damping off	6 kg/ha (6 g/10 sqm)	Apply at 7-10 day intervals when diseases are prevalent in summer and autumn. Apply as a soil drench in sufficient water to penetrate into the soil.
Ornamentals	Rose black spot Carnation leaf spot Chrysanthemum spot	125 g/100 L of water	Apply as required.
Soil and glasshouse soil drench	Damping-off	125 g/100 L Apply to 100 sqm	Apply and work into the top 100 mm of soil before planting

It is an offence for users of this product to cause residues exceeding the relevant MRL in the Food Notice: Maximum Residues Levels for Agricultural Compounds.

WITHHOLDING PERIODS

Apples and pears: 3 days
Boysenberries: 14 days
Blueberries: 1 day
Carrots: 14 days
Citrus: 28 days
Cucurbits: 3 days
Currants: 1 day
Grapes: 21 days. Leaf plucking in vineyards: Sheep must not be sent for slaughter or milked for 2 months after being removed from the vineyard (and placed on clean feed).
Gooseberries: 1 day
Lettuce: 7 days
Loganberries and other brambles: 14 days
Raspberries: 1 day
Stonefruit: 7 days

MINISTRY FOR PRIMARY INDUSTRIES

Public

Strawberries: 1 day
For export crops – consult with your exporter for advice about any residue restrictions that may apply to the intended importing country

MIXING
Partly fill the spray tank. Turn on agitation and while continuing to fill the tank, add the required amount of **CAPETEC** directly into the tank. Maintain agitation during spraying and agitate thoroughly after a stoppage. Add any tank mixing partners just before tank filling is complete.

Knapsack sprayer rates:
Hydraulic type knapsack: 13 g/10 L of water.
Motorised airblast knapsack: 40 g/10 L of water. Use the middle settings on the restrictor and operate at sufficient revs to produce small droplets

APPLICATION
Apply in sufficient water to obtain complete coverage. For horticultural crops, the rates are for high volume spraying to run-off. For concentrate spraying adjust dilution rate accordingly. Use the high rate under high insect pressure and when spraying on a 10-14 day schedule. Alternatively, use crop monitoring to determine when to spray for appropriate crops.

COMPATIBILITY
CAPETEC is compatible with most commonly used pesticides. Do not apply with highly alkaline products such as Bordeaux mixture or lime sulphur. Do not mix with oils or emulsifiable concentrates. **CAPETEC** mixed with sulphur and used on the apple varieties Kidds Orange, Delicious and other 'sulphur shy' varieties, may cause leaf spotting and leaf drop may occur.
